Module 10 - Capstone Project Part 3.3

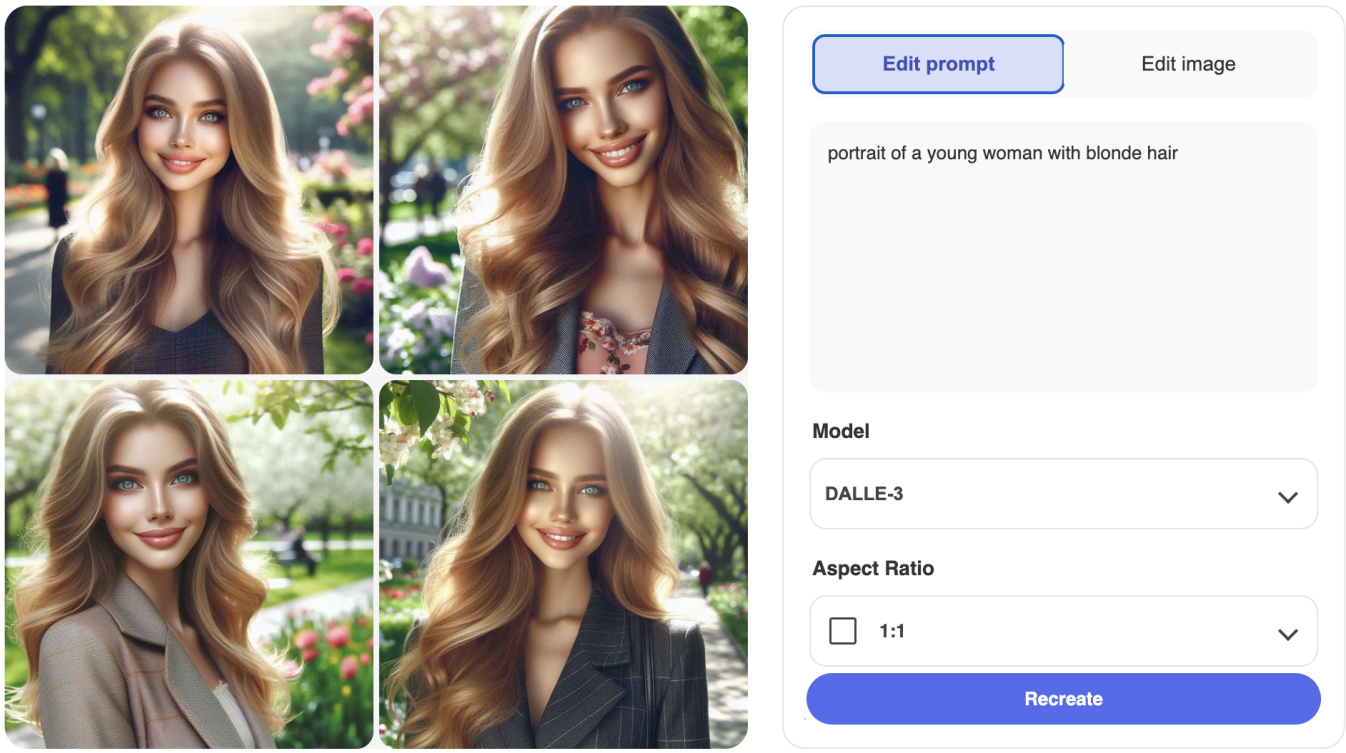
> Submitted by Phillip Amir Esguerra

Part 1: Technical Specifications Impact

Base: Woman Portrait

> portrait of a young woman with blonde hair

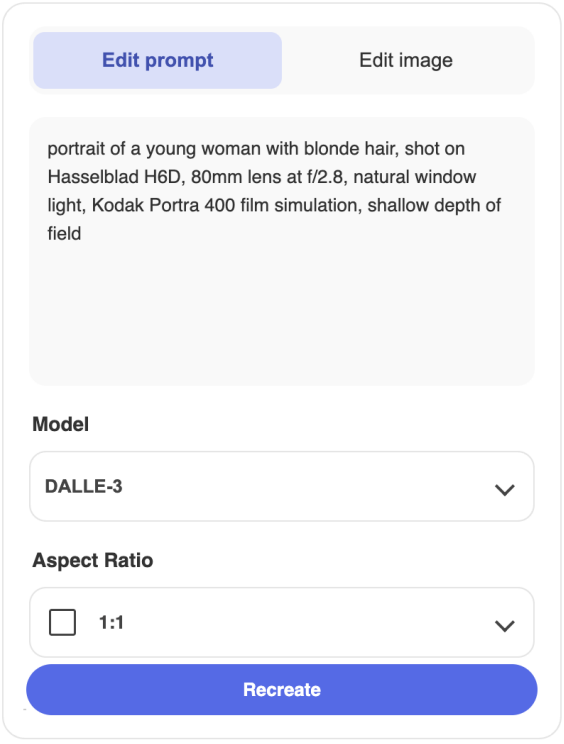
Screenshot:



Technical: Woman Portrait

> portrait of a young woman with blonde hair, shot on Hasselblad H6D, 80mm lens at f/2.8, natural window light, Kodak Portra 400 film simulation, shallow depth of field

Screenshot:



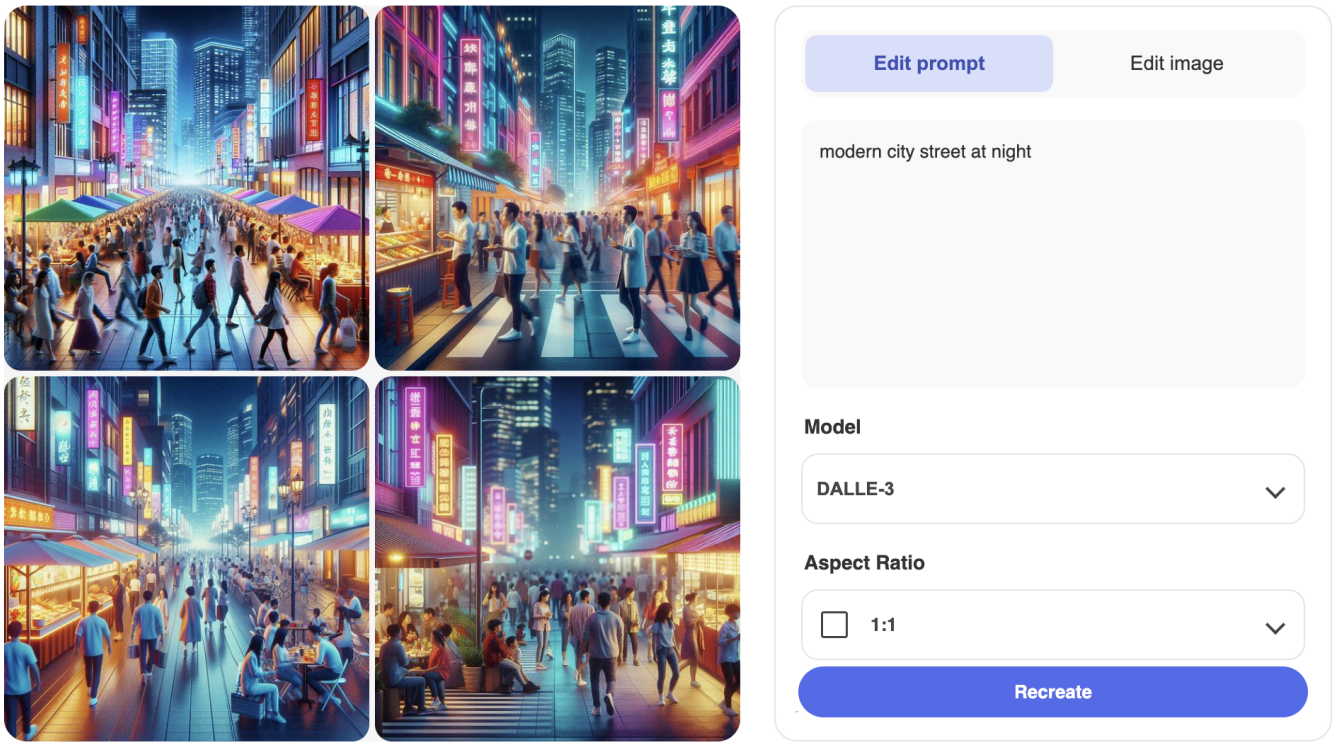
Interpretation: Woman Portrait

Ignoring the cartoonish look of the base prompt, the technical prompt invokes a more professional look in terms of posing lighting and the look of depth of field. It didn't seem to follow the warm color look of Portra 400 according to this Fuji camera film simulation recipe I use in some of my side hobbies: https://fujixweekly.com/2020/05/10/my-fujifilm-x-t30-kodak-portra-400-film-simulation-recipe/. The soft lighting of a natural window light is captured well, also mentioning that in the images, it can be infered that it is taken beside the window.

Base: Modern City Street at Night

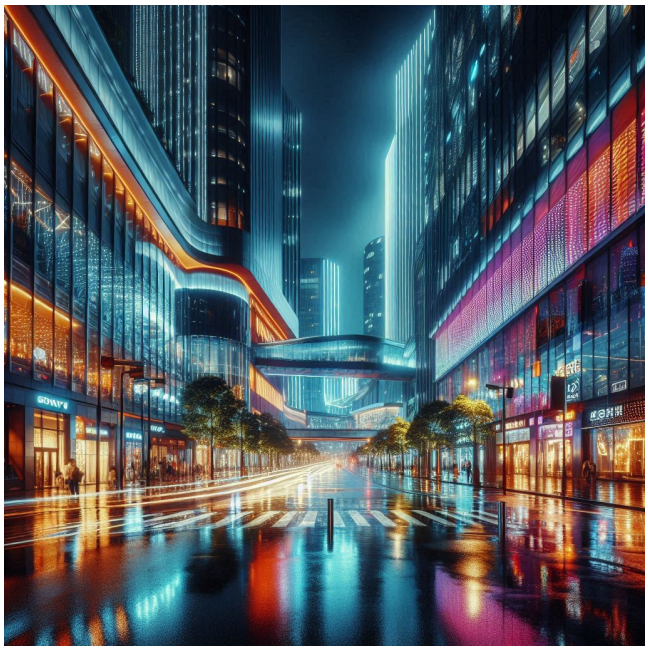
> modern city street at night

Screenshot:

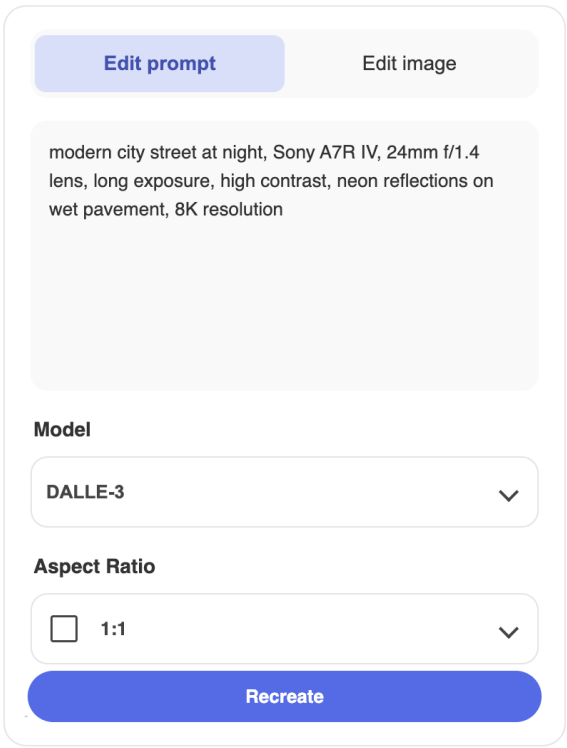


Technical: Modern City Street at Night

> modern city street at night, Sony A7R IV, 24mm f/1.4 lens, long exposure, high contrast, neon reflections on wet pavement, 8K resolution



Screenshot:



Interpretation: Modern City Street at Night

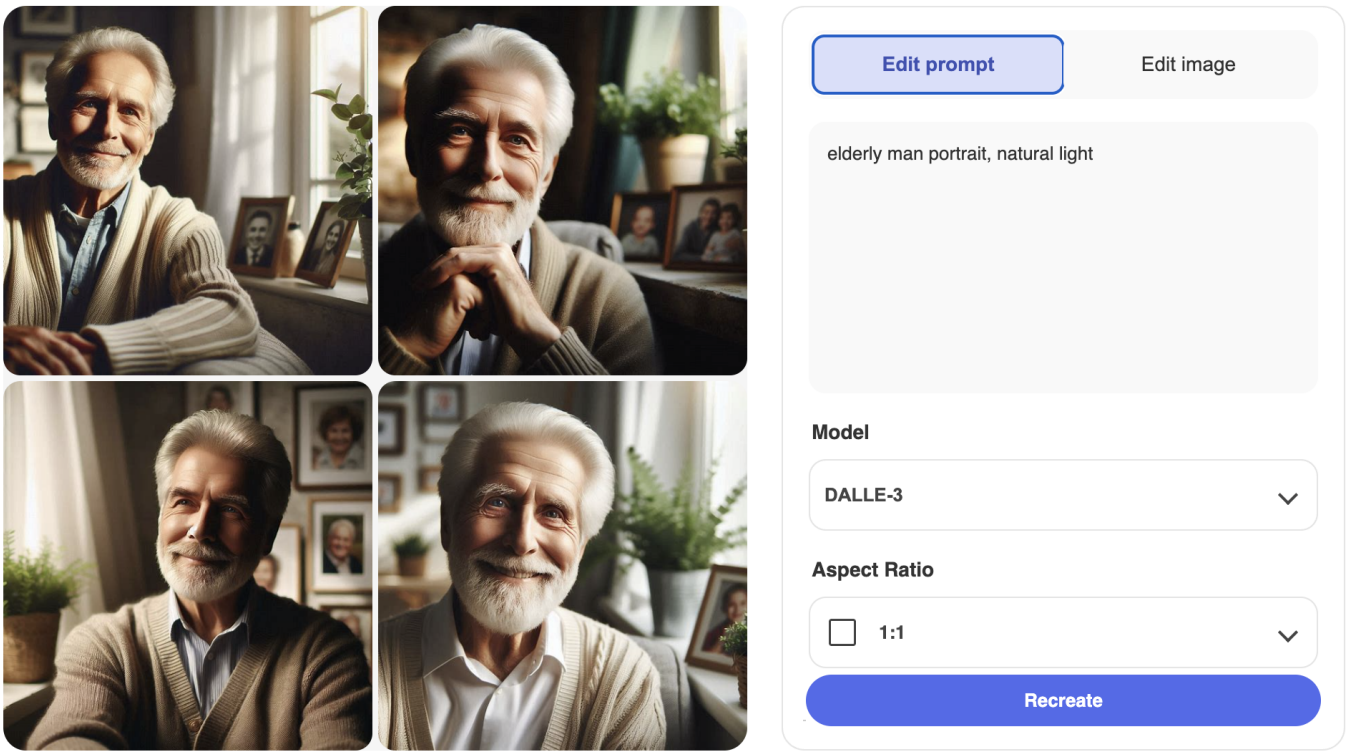
The result of the base prompt looks cartoonish as well, or more like a poster. The technical prompt provides a more stylish look where it showed reflections on wet pavement. The light trails on long exposure looks great but its reflection was not shown/generated. It captures high contrast of colors from blue to orange as well.

Part 2: Lighting Experiments

Prompt 1: Elderly Man Portrait

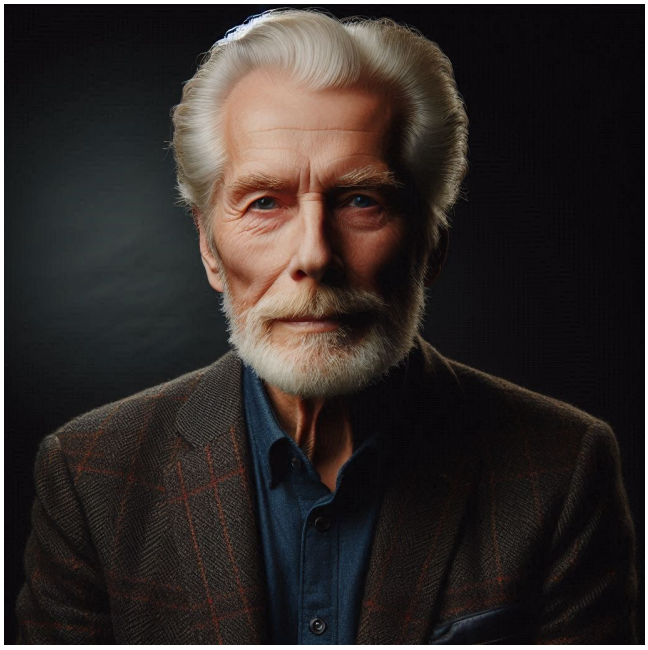
> elderly man portrait, natural light

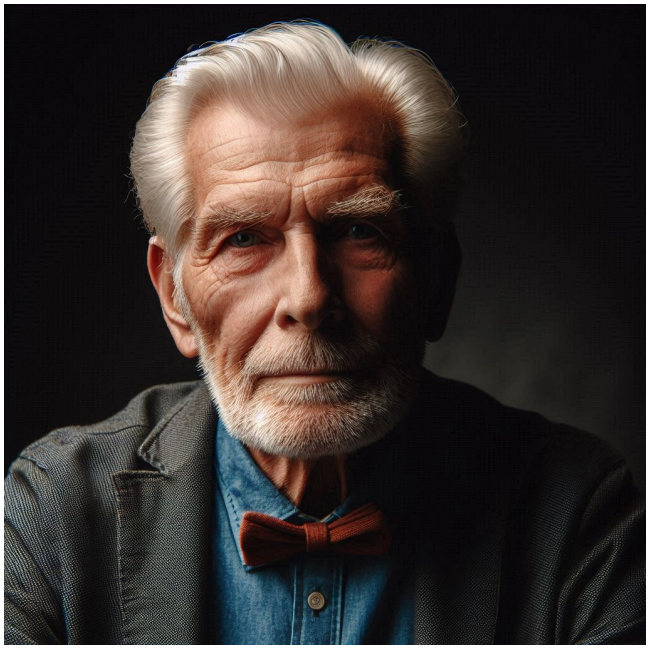
Screenshot:

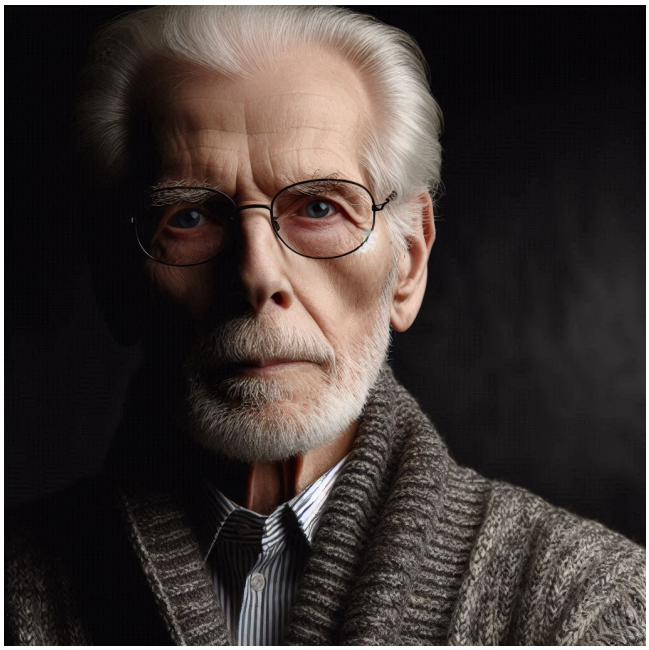


Prompt 2: Elderly Man Portrait

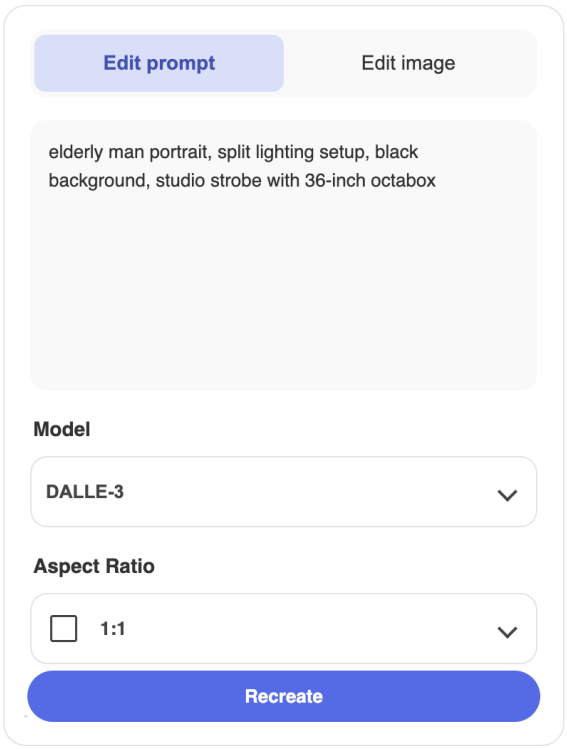
> elderly man portrait, split lighting setup, black background, studio strobe with 36-inch octabox







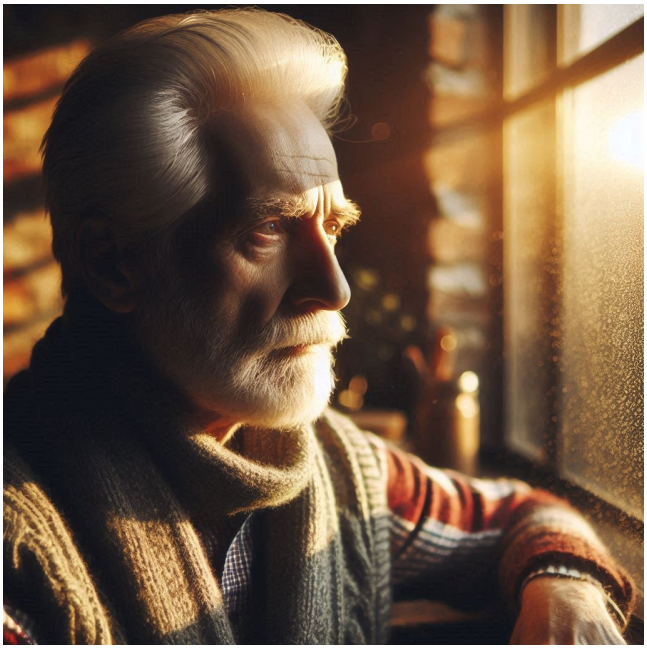
Screenshot:

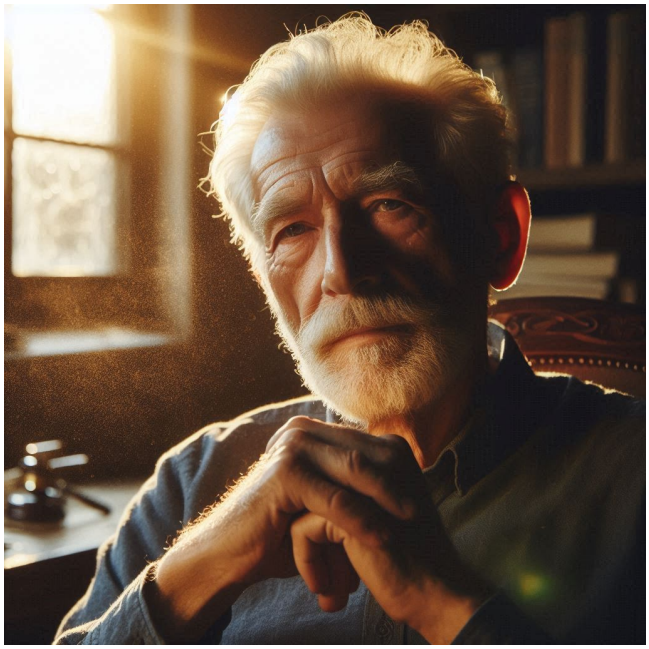


Prompt 3: Elderly Man Portrait

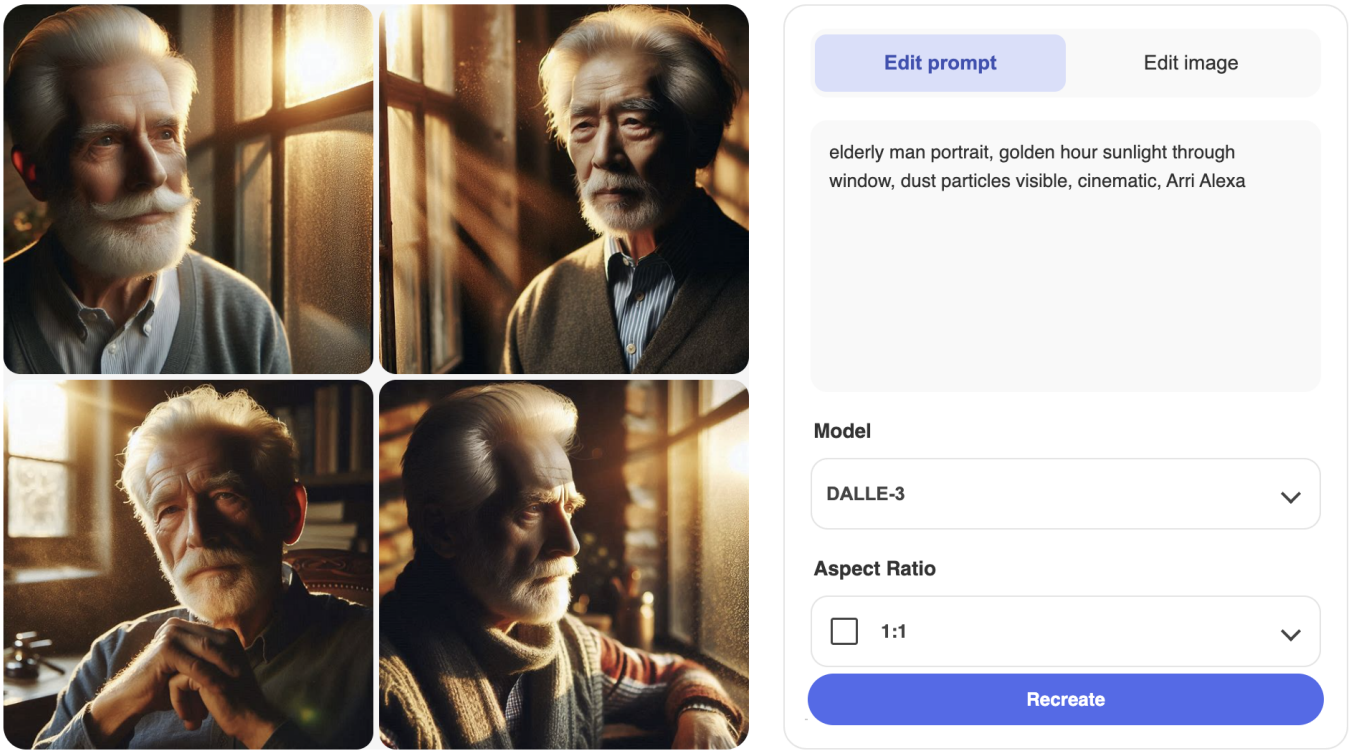
> elderly man portrait, golden hour sunlight through window, dust particles visible, cinematic, Arri Alexa

---





Screenshot:



Interpretation: Elderly Man Portrait

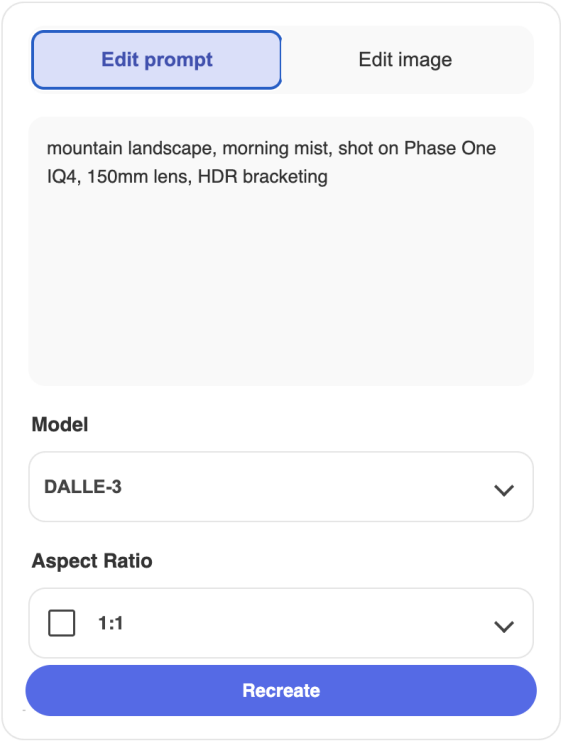
In these series of prompts, everything looks great especially the one with studio strobe lighting. The direction of shadows generated by the lighting looks natural especially with the third prompt with its slight diffused golden light. Skin texture wise, the first prompt looks cartoonish, but the second prompt looks very natural. Rendering portraits in studio setting, the mood is very different that the subject looks very serious, unlike the first prompt where the subject looks hopeful and the third prompt the subject looks longing or nostalgic. With the background generation, it captures the environment well especially in the third prompt where it displays dust particles in the background.

Part 3: Style and Medium Control

Photography

> mountain landscape, morning mist, shot on Phase One IQ4, 150mm lens, HDR bracketing

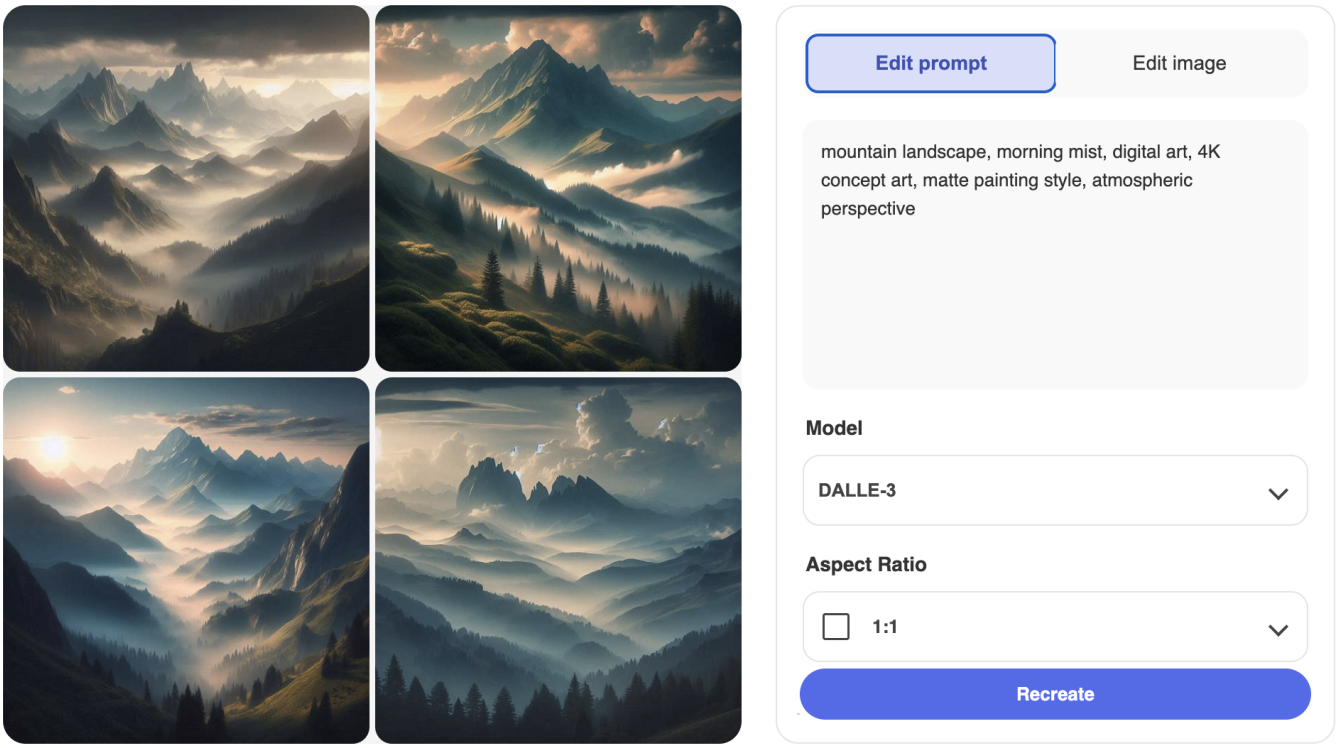
Screenshot:



Digital Art

> mountain landscape, morning mist, digital art, 4K concept art, matte painting style, atmospheric perspective

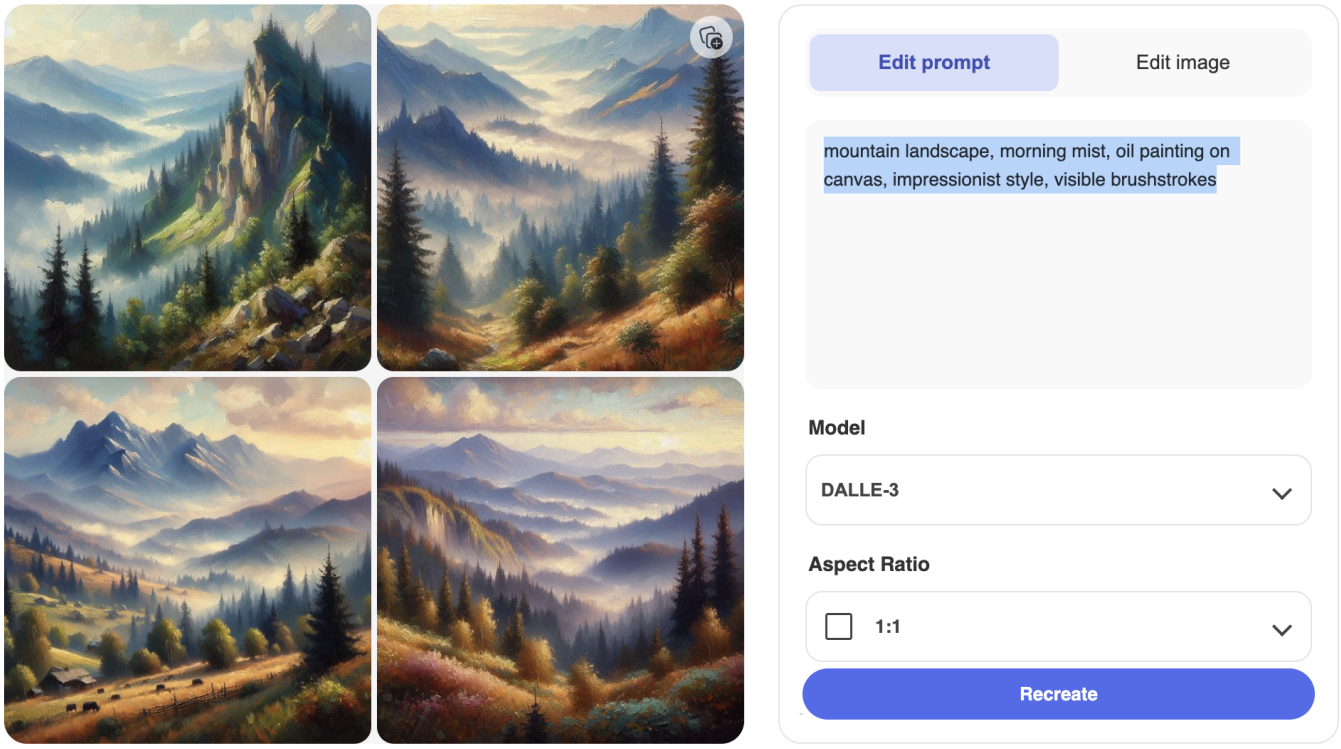
Screenshot:



Traditional Medium

> mountain landscape, morning mist, oil painting on canvas, impressionist style, visible brushstrokes

Screenshot:



Interpretation

With the first two (photography and digital art), both generations looks similar. There are some artifacts in the digital prompt, see 2nd or 4th image. The third prompt for traditional medium looks very much like an oil painting. In the third painting, we can also see each brush strokes in the individual details - I believe the prompt for making brushstrokes visible worked well in this case. The third prompt also had consistent results for all four generated images.
